Chapter 1

Overview

myNanoEmbedded is a lightweight C library of source files that integrates Nano Cryptocurrency to low complexity computational devices to send/receive digital money to anywhere in the world with fast transaction and with a small fee by delegating a Proof of Work with your choice:

- DPoW (Distributed Proof of Work)
- P2PoW (a Decentralized P2P Proof of Work)

API features

- Attaches a random function to TRNG hardware (if available)
- Self entropy verifier to ensure excellent TRNG or PRNG entropy
- Creates an encrypted by password your stream or file to store your Nano SEED
- Bip39 and Brainwallet support
- Convert raw data to Base32
- Parse SEED and Bip39 to JSON
- Sign a block using Blake2b hash with Ed25519 algorithm
- ARM-A, ARM-M, Thumb, Xtensa-LX6 and IA64 compatible
- Linux desktop, Raspberry PI, ESP32 and Olimex A20 tested platforms
- Communication over Fenix protocol bridge over TLS
- Libsodium and mbedTLS libraries with smaller resources and best performance
- Optimized for size and speed
- Non static functions (all data is cleared before processed for security)

To add this API in your project you must first:

1. Download the latest version.

```
git clone https://github.com/devfabiosilva/myNanoEmbedded.git --recurse-submodules
```

2. Include the main library files in the client application.

```
#include "f_nano_crypto_util.h"
```

Initialize API

Function	Description
<code>f_random_attach()</code> (p. ??)	Initializes the PRNG or TRNG to be used in this API

Transmit/Receive transactions

To transmit/receive your transaction you must use `Fenix` protocol to stabilish a DPoW/P2PoW support

Examples using platforms

The repository has some examples with most common embedded and Linux systems

- Native Linux
- Raspberry Pi
- ESP32
- Olimex A20
- STM

5.5.4 Function Documentation

Parameters

5.5.4.1 f_pass_must_have_at_least()

```
int f_pass_must_have_at_least (
    char * password,
    size_t n,
    size_t min,
    size_t max,
    int must_have )
```

Checks if a given password has enough requirements to be parsed to a function.

Parameters

in	<i>password</i>	Password string
in	<i>n</i>	Max buffer string permitted to store password including NULL char
in	<i>min</i>	Minimum size allowed in password string
in	<i>max</i>	Maximum size allowed in password
